Educational Programs and Materials

TID notifies its members of water issues and conservation topics through mailings of occasional District Notices. Beginning during fall 2005, TID will combine these notices into one discussion, mailed yearly, and updated for accuracy prior to each mailing. Topics will include, but not be limited to, availability of on-farm irrigation evaluations by Mobile Labs, crop and field water data available from the district office, irrigation scheduling services available in the area, weather data, crop water use needs, and water quality reports of district surface and groundwater supplies.
